

RoeTest – Computer Tube Testing / Tube Measuring System
(c) - Helmut Weigl www.roehrentest.de

Your cooperation is welcome

With such a large project there is always a possibility for errors. If you find errors in the documentation, the hardware or software or the tube data please report them to me (please describe as exactly as possible). Only with feedback there is a meaningful further development.

I am also thankful for realizable improvement suggestions.

Meantime the tube database has reached a large size. For sure tube data will have to be added over and over again. If a specific tube type shall be added to the database please inform me (if the tube type is exotic please supply me with the data sheets).

Also most of the tube data are untested (due to the lack of the corresponding tube). If you can verify those tube data with a measurement please inform me and confirm the tube data of the respective tube as tested.
